5. The online flight reservation system enables users to search for flights by destination, date, and class, displaying available options with real-time seat availability. Users can register, log in, and manage their reservations via a personal dashboard. The booking process includes selecting flights, choosing seats, entering passenger details, and making secure payments through an integrated payment gateway. Admins can manage flight schedules, seat inventory, and user accounts using an advanced admin panel. Users receive booking confirmation emails with e-tickets and can view their booking history and travel itineraries. The website is fully responsive, ensuring an optimal experience on all devices.The airline reservation system is a web-based system that helps in consolidating flight data - flight schedules, seat availability, flight fares and reservations from all airlines with the help of global distribution systems and provides real-time inventory and rates for customers and travel agents to book flight tickets online.

1. Aim

To design and develop an Online Flight Reservation System using HTML, CSS and JavaScript. It allows users to search flights, select seats, enter passenger details and confirm flight bookings.

2. Algorithm

1. Start the program.
2. Display the flight reservation homepage.
3. Allow users to register and log in.
4. Enter source, destination and travel date.
5. Select travel class (Economy, Business or First Class).
6. Display available flights, timings, fares and seats.
7. Select a flight and choose a seat.
8. Enter passenger details.
9. Calculate the ticket fare and proceed with payment.
10. Display booking confirmation and e-ticket.
11. Allow users to view booking history and travel itinerary.
12. Admin manages flight schedules, seat availability and user accounts.
13. Stop the program.

HTMLCODE

```
<!DOCTYPE html>
<html>
<head>
<title>Flight Reservation System</title>
<style>
body {
    font-family: Arial;
    background: #eaf2ff;
    margin: 0;
}
header {
    background: #1e40af;
    color: white;
    padding: 20px;
    text-align: center;
}
.box {
    background: white;
    padding: 20px;
    margin: 20px auto;
    width: 80%;
    border-radius: 10px;
}
input, select {
    width: 95%;
    padding: 10px;
    margin: 8px;
}
button {
```

```
    background: #2563eb;
    color: white;
    padding: 12px;
    border: none;
    cursor: pointer;
}
</style>
</head>

<body>

<header>
<h1>SKYBOOK FLIGHT RESERVATION</h1>
<p>Book Your Flights Online</p>
</header>

<div class="box">
<h2>User Login</h2>

}
</script>

</body>
</html>
```

DESIGN

Result

Thus, the Online Flight Reservation System was successfully designed using HTML, CSS and JavaScript. It allows users to search flights, select seats, enter passenger details and display booking confirmation**.**
